# The Discovery and Characterization of CFT8634: A Potent and Selective Degrader of BRD9 for the Treatment of SMARCB1-Perturbed Cancers

Katrina L. Jackson, Roman V. Agafonov, Mark W. Carlson, Prasoon Chaturvedi, David Cocoziello, Kyle Cole, Richard Deibler, Scott J. Eron, Andrew Good, Ashley A. Hart, Minsheng He, Christina S. Henderson, Hongwei Huang, Marta Isasa, R. Jason Kirby, Linda Lee, Michelle Mahler, Moses Moustakim, Christopher G. Nasveschuk, Michael Palmer, Laura L. Poling, Roy M. Pollock, Matt Schnaderbeck, Stan Spence, Gesine K. Veits, Jeremy L. Yap, Ning Yin, Rhamy Zeid, Adam S. Crystal, Andrew J. Phillips, Stewart L. Fisher

C4 Therapeutics, Inc  
Watertown, MA USA

## Katrina L. Jackson, PhD

- I have the following financial relationships to disclose:
  - Stockholder in: C4 Therapeutics
  - Employee of: C4 Therapeutics
- I will not discuss off label use and/or investigational use in my presentation.

# BRD9: Drugging the Undruggable with a Heterobifunctional Degrader Approach

AACR  
American Association  
for Cancer Research®

ANNUAL  
MEETING  
2022 New Orleans

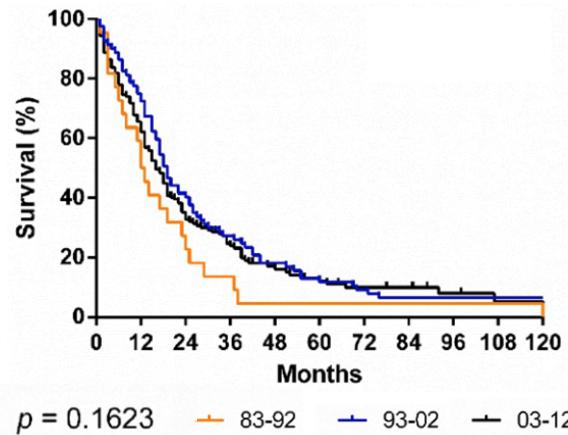

APRIL 8-13 • #AACR22

## Strong Rationale for Degrader Approach<sup>1,2</sup>

- Synovial sarcoma (SS) is dependent on BRD9 due to the oncogenic SS18-SSX fusion
- Inhibition of the BRD9 bromodomain is insufficient to ablate its oncogenicity

## Clear Unmet Need<sup>3</sup>

- Very limited benefit of treatments for metastatic or advanced synovial sarcoma, median survival ~18 months

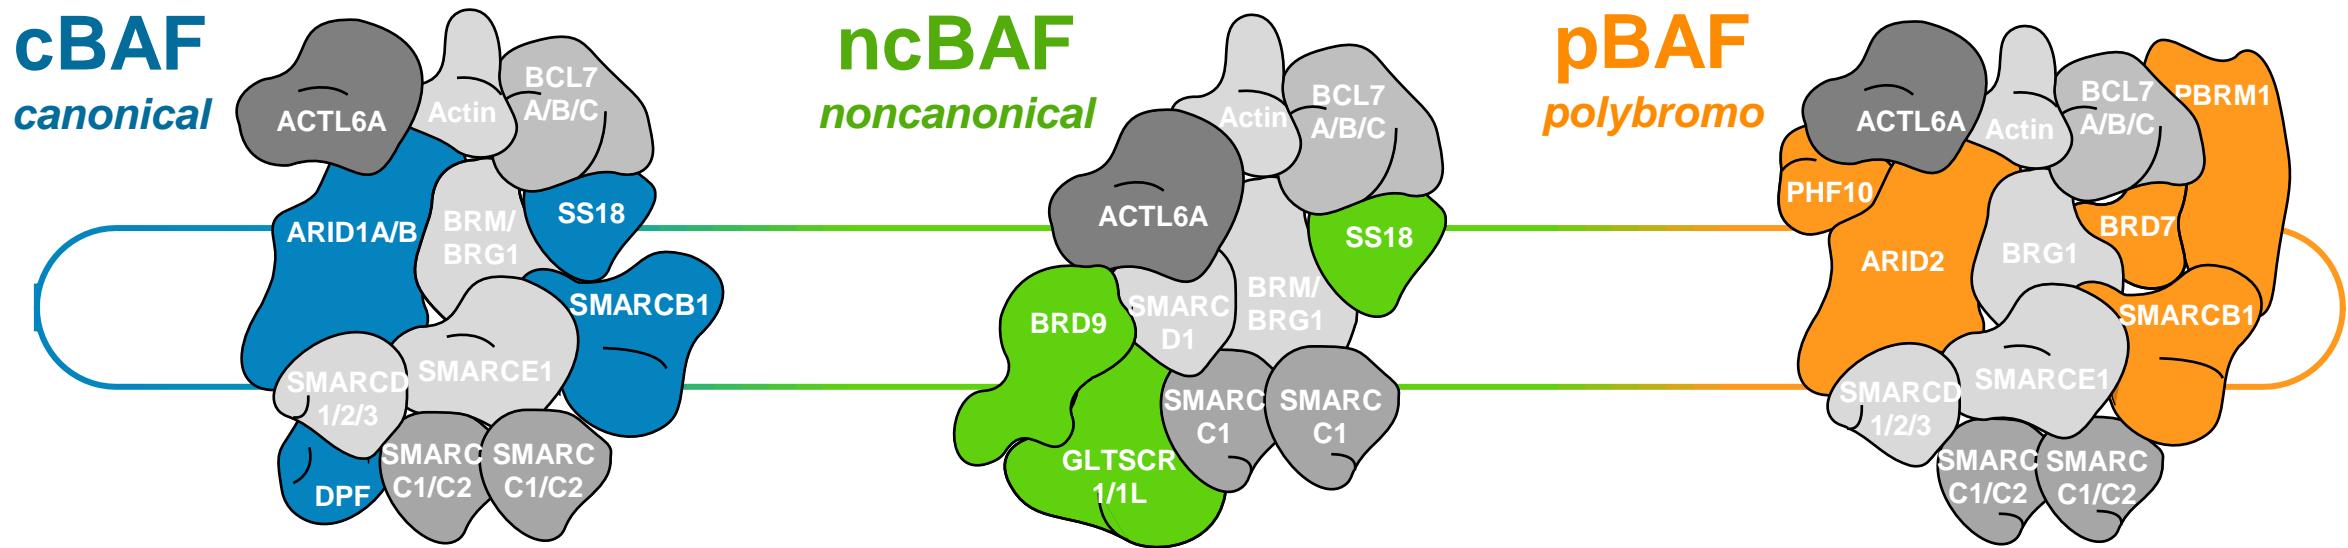

## Defined Patient Population<sup>a</sup>

- US incidence: ~900 cases/year
- ~10% of all soft tissue sarcomas
- Median age at diagnosis: 34 years old

<sup>a</sup> Patient figures represent estimated U.S. annual incidence.  
SS, synovial sarcoma.

ANNUAL  
MEETING  
2022 New Orleans

APRIL 8-13 • #AACR22

1 Incorporation of SS18-SSX fusion results in eviction of SMARCB1

- cBAF complex compromised
- Oncogenic state

2 Inactivation of SMARCB1 leads to dependency on ncBAF complex

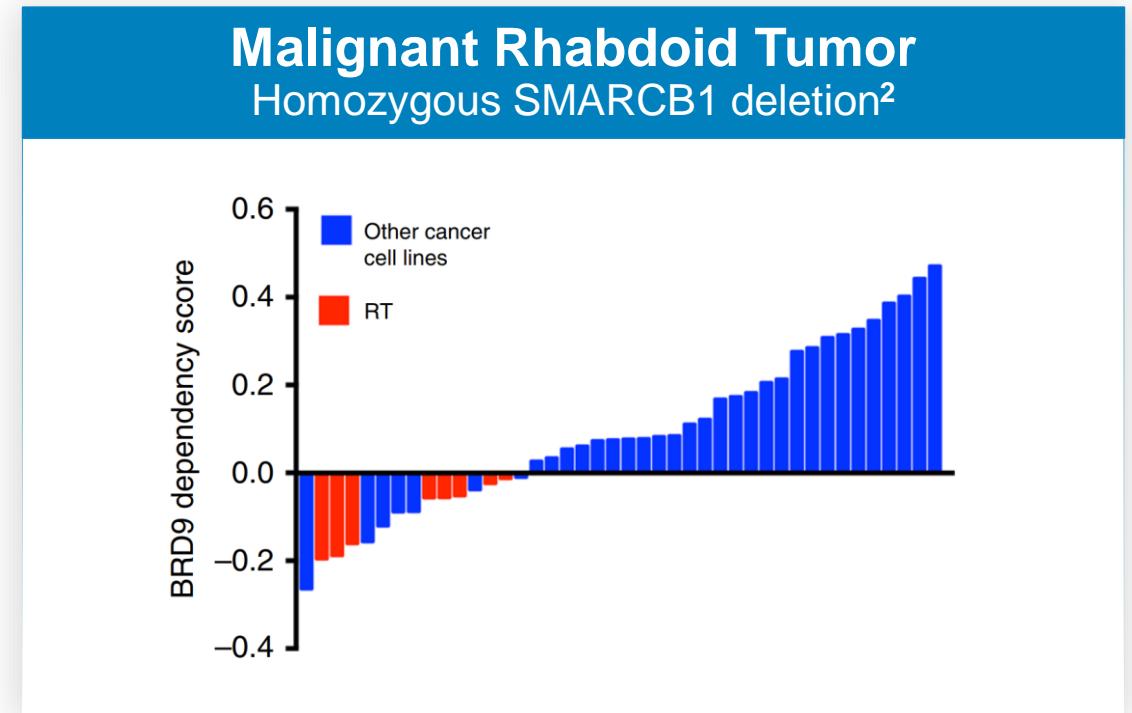

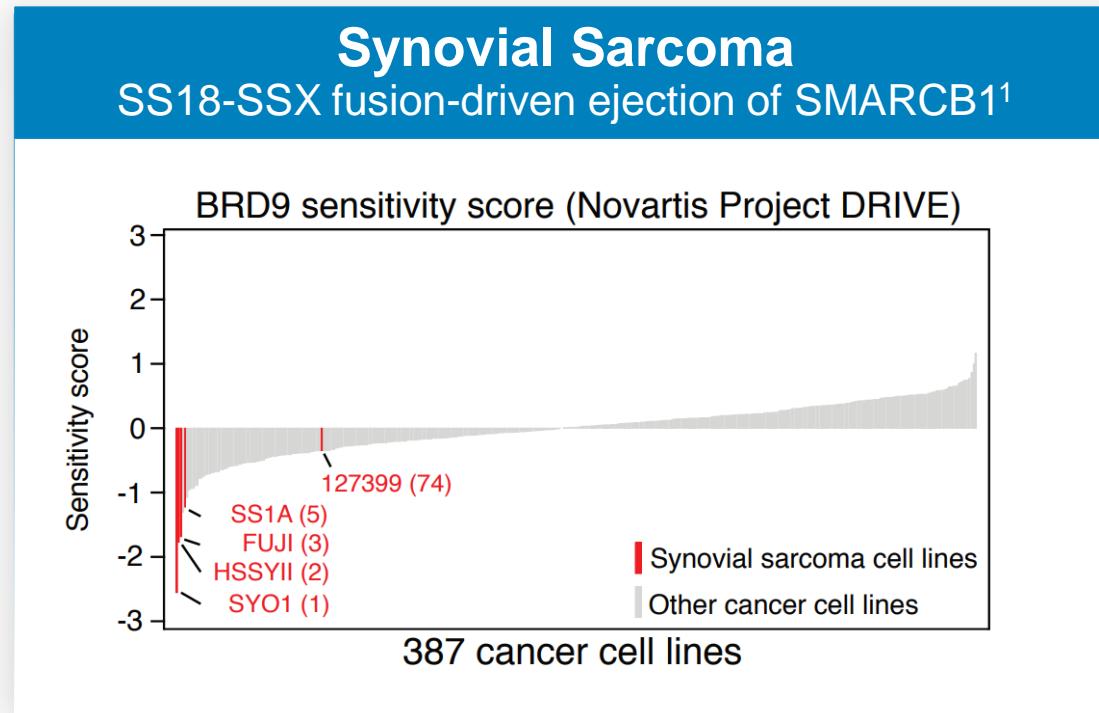

- BRD9 is uniquely present in ncBAF
- ***Synthetic lethal dependency on BRD9*** in synovial sarcoma and other SMARCB1-deficient cancers

# BRD9 is a Selective Dependency in SMARCB1-Perturbed Contexts

AACR  
American Association  
for Cancer Research®

ANNUAL  
MEETING  
2022 New Orleans

APRIL 8-13 • #AACR22

Genome-wide loss-of-function CRISPR screens identify BRD9 as a unique dependency in synovial sarcoma and malignant rhabdoid tumor cell lines

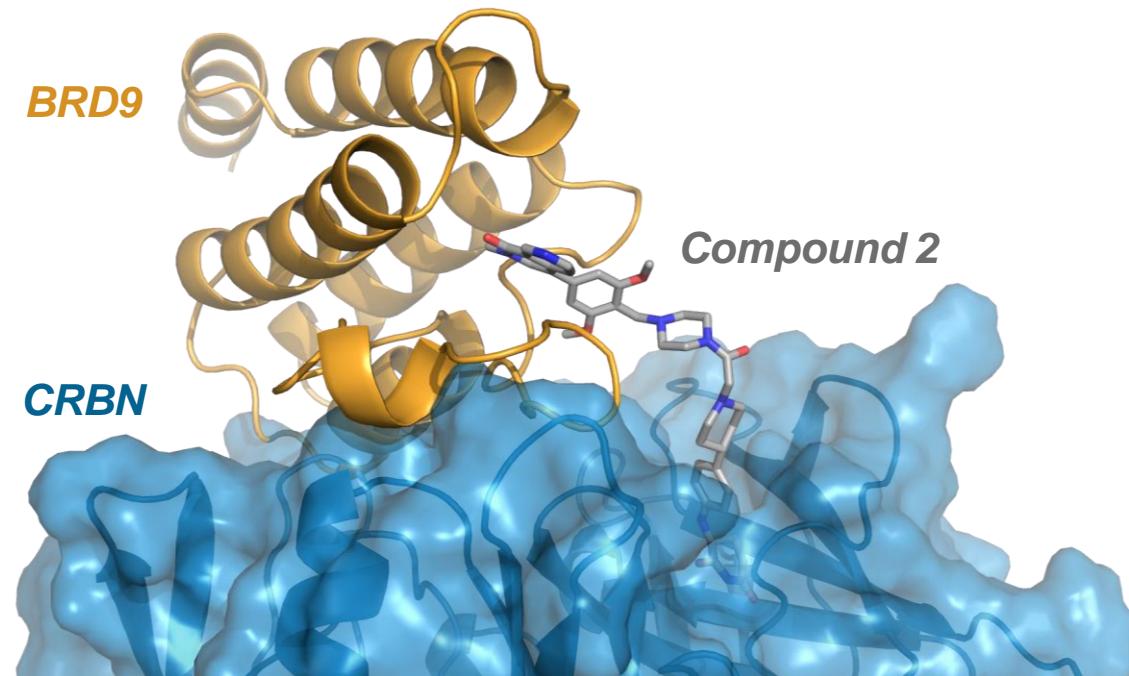

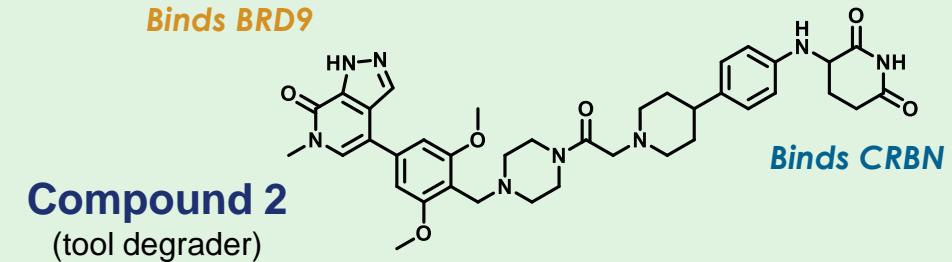

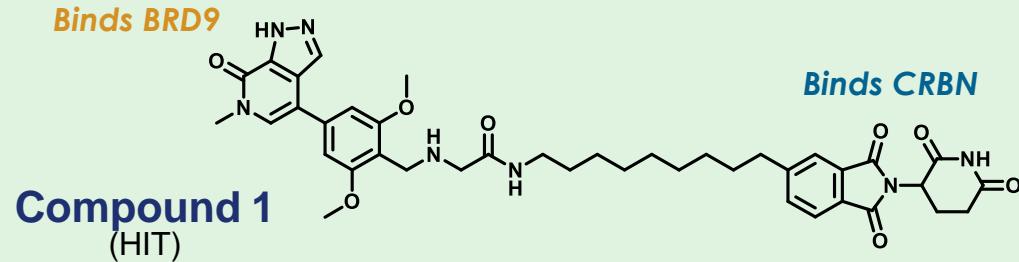

RT, rhabdoid tumor.

# Ternary Complex Analysis Suggests Linker Excision is Possible

AACR  
American Association  
for Cancer Research®  
ANNUAL  
MEETING  
2022 New Orleans

APRIL 8-13 • #AACR22

## Features of tool degrader, Compound 2:

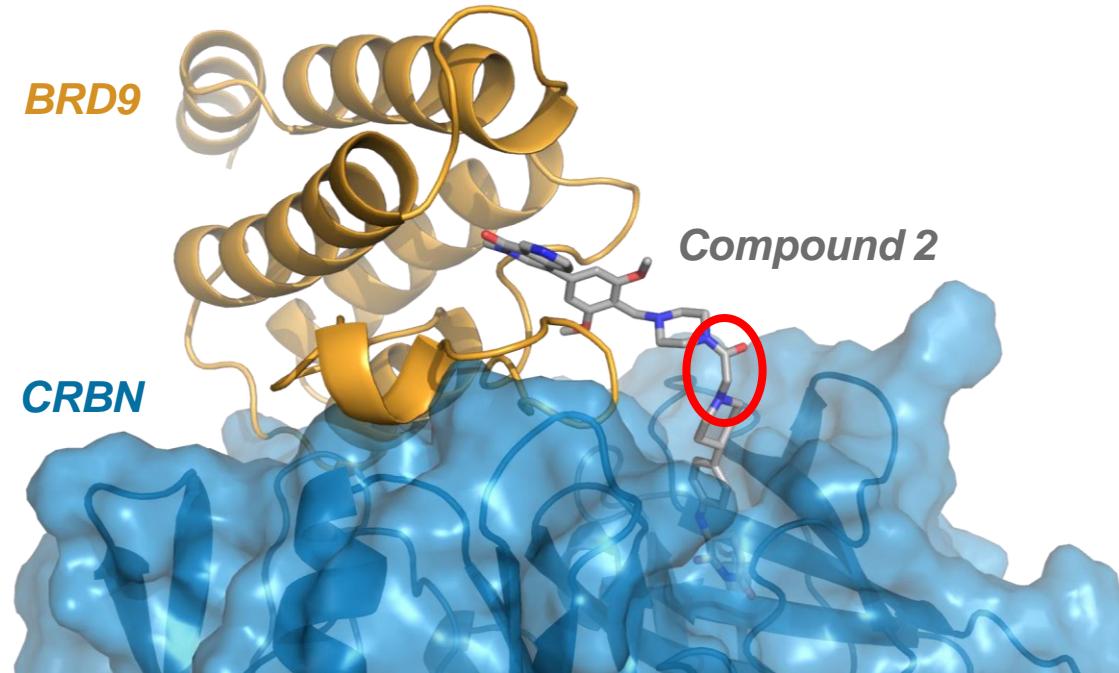

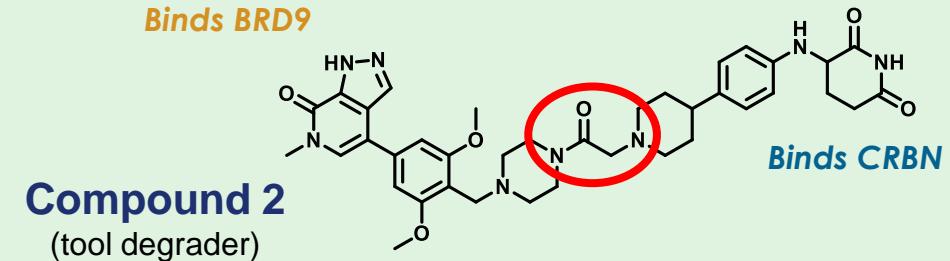

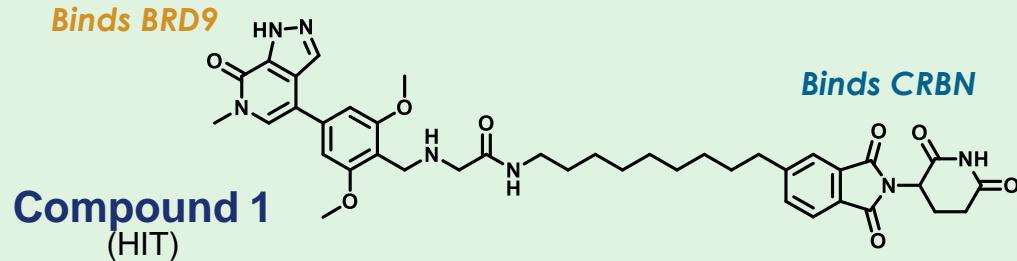

- Potent BRD9 degrader
- Suboptimal selectivity over BRD4
- Acceptable mouse IV PK profile
- No oral exposure

**GOAL:** Identify a potent & selective  
BRD9 degrader suitable for oral dosing

# Ternary Complex Analysis Suggests Linker Excision is Possible

AACR  
American Association  
for Cancer Research®  
ANNUAL  
MEETING  
2022 New Orleans

APRIL 8-13 • #AACR22

**Hypothesis:** Elimination of the linker will result in a tighter ternary complex

## Potential advantages:

- Greater selectivity over BRD4, BRD7
- Smaller degraders with better properties and higher oral bioavailability

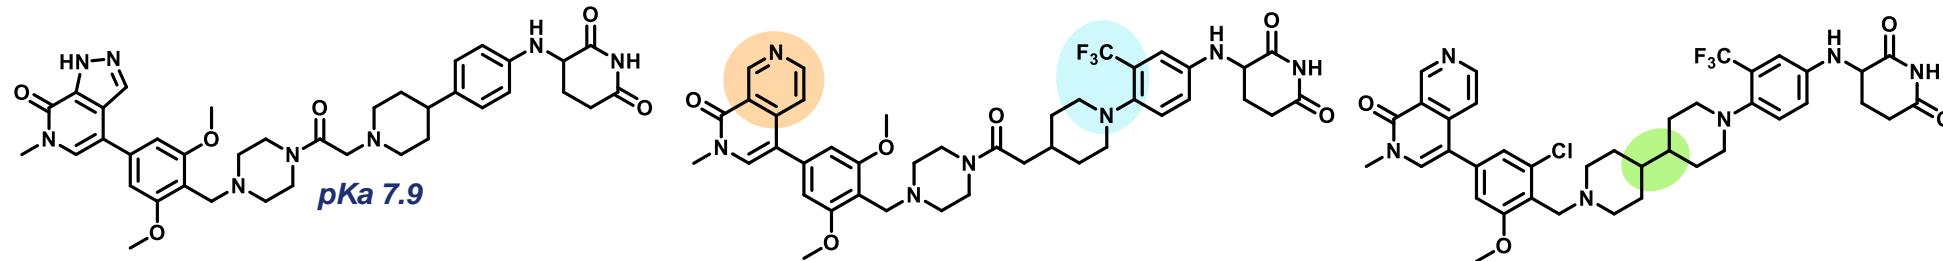

# Linker Excision & Properties Tuning Results in Encouraging Oral Bioavailability

# Durable Response Observed in a PDX Model of Synovial Sarcoma

AACR  
American Association  
for Cancer Research®  
ANNUAL  
MEETING  
2022 New Orleans

APRIL 8-13 • #AACR22

## Durable Tumor Regression in PDX SA13412

- Treatment administered for 89 days followed by 51-day observation period
- Tumor regressions were durable with no regrowth observed

- Vehicle (PO, QD)
- CFT8634 50 mg/kg (PO QD)
- CFT8634 25 mg/kg (PO BID)
- CFT8634 16.6 mg/kg (PO TID)

# Conclusions

- Extensive medicinal chemistry efforts leading to CFT8634, a potent, selective, and orally bioavailable BiDAC™ degrader, highlight the potential of the TORPEDO® platform to create degrader medicines that may drug the undruggable with a BiDAC™ degrader approach

- CFT8634 selectively inhibits the growth of BAF-perturbed cell lines and demonstrates robust efficacy in clinically-relevant patient-derived xenograft models of synovial sarcoma

- Based on the pre-clinical profile of CFT8634, a Phase 1/2 trial in patients with synovial sarcoma and SMARCB1-null solid tumors is planned to initiate in the first half of 2022
